Elastic string washable and interchangeable

RFID Rubber Band Bracelet

Identify with precision the number of users that move within a structure has become a concern for many organizations working in the leisure sector.

We suggest a sturdy microelectronic technology using electromagnetic waves (RFID), capable of operating in any environment and in any situation, resistant to water, shocks and high temperature.

The rubber band bracelet can be used for access management and electronic money (credit scaling), allowing to move in absolute freedom and with no use of cash.

MADE IN ITALY
